English 2
How to Create a Pull Request

Name

Dicha Zelianivan Arkana

NIM

2241720002

Class

1i

Department

Information Technology

Study Program

D4 Informatics Engineering

START

Open your browser

Go to github.com

Try to find the repository

Click the fork button

will be directed to the fork option page

Click create fork

fork of the repository will be created on our account

add the repository url as one of our remote url using `git remote add name-of-the-remote` command from our terminal

push our commit to the forked repository on the appropriate branch using `git push name-of-the-remote branch-namee`

Go to the forked repository page on Github

Is there an Open Pull Request button?

yes

no

Click the open pull request button

Checks if the commit has been properly pushed

Write the title and the detail of the pull request so that the author knows what we've done

Click create pull request

Wait until the repository author gives a response

Repository author wants a revision?

no

yes

The author merge the pull request

Revise the pull request content

END
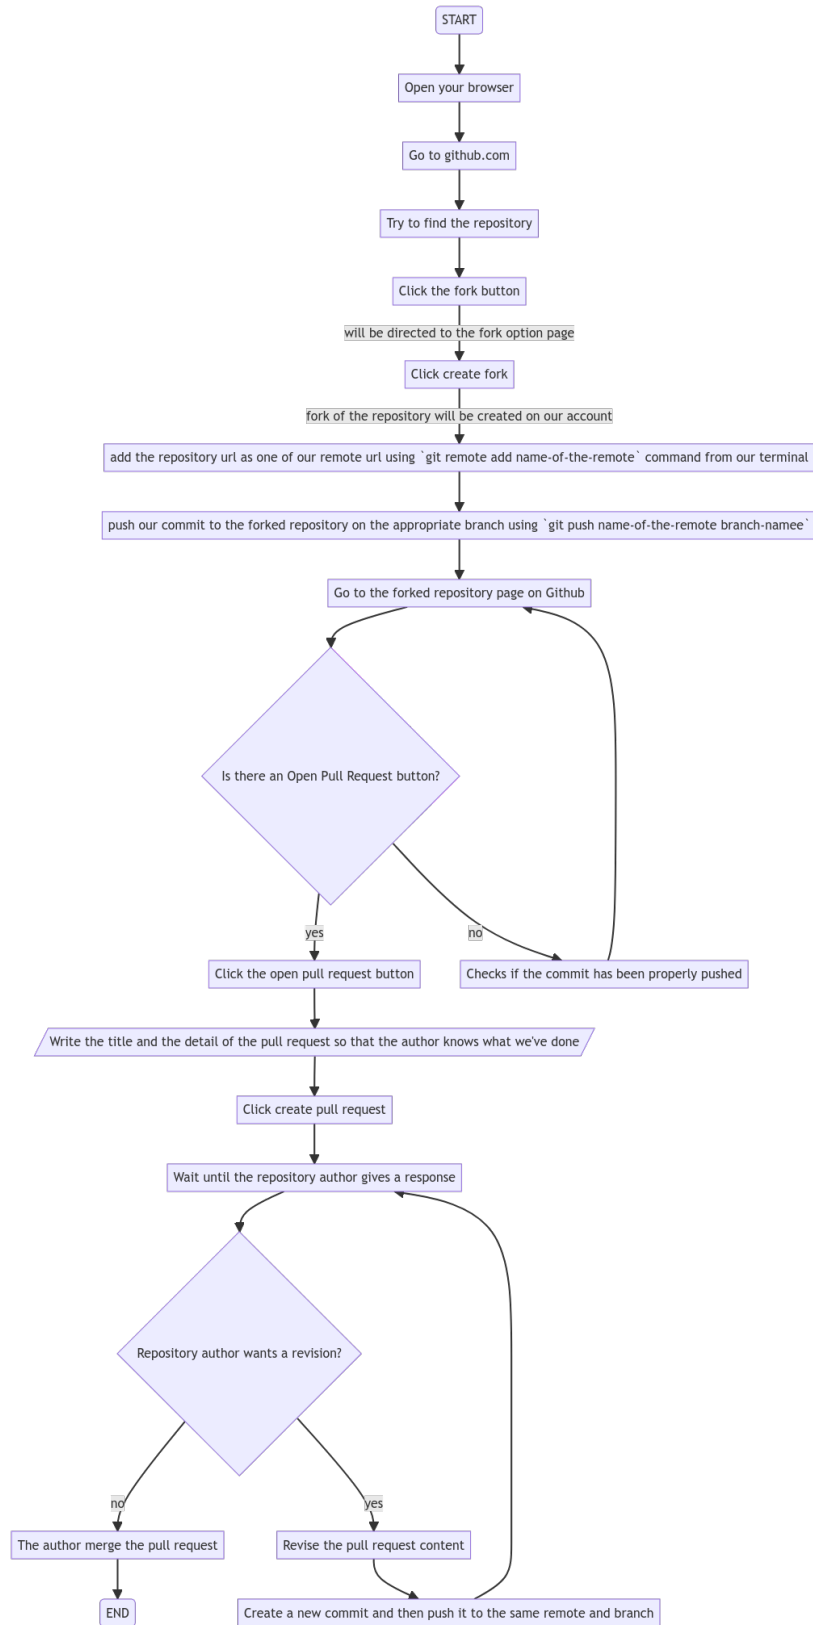

Create a new commit and then push it to the same remote and branch
